Infologic delivers new display controllers for the Vantaa Airport terminal extension

Infologic Nederland B.V. announced that it has delivered Finavia a new batch of graphical display controllers. These display controllers will be implemented by the operator of Vantaa Helsinki airport in the terminal extension for non-schengen travelers.

Airport expansion

As part of the airport expansion and renovation program underway at Vantaa Airport, Finavia has requested Infologic to deliver graphical display controllers for use in the existing Infologic FIDS environment. The Infologic Graphical Display Controller or GDC is being used throughout Vantaa airport to run the Infologic FIDS client.

Finavia, the operator of Vantaa airport has been using the Infologic Flight Information Display System for over 14 years. Over the years, Infologic has delivered more than 500 GDC's for that runs the Infologic FIDS display client. Infologic has provided the real-time solution that fully integrates central database functionality into the FIDS.

About Finavia

Finavia maintains Finland's network of airports and the air navigation system. The company provides and develops safe, competitive airport and air navigation services as well as their supporting commercial operations, to an internationally high standard. The Finavia customers are suppliers to the air travel industry and air passengers. The company is a commercial enterprise financed by the users, and determines its operations, financing and investments independently. The Council of State sets the general operational and profit targets.
